Hani Khan

Staff Product Designer

San Antonio, TX
Available for opportunities

A designer and builder with **10 years of experience** in product and 3 years in building LLM-powered experiences. I specialize in end-to-end design for emerging technologies, from strategy and prototypes to system prompts and evals.

Experience

H-E-B

May 2020 – Present
6 years, 7 months

Staff Product Designer, AI & Personalization

- Designed AI-assisted search, wrote the system prompt and safety instructions, and ran evals that raised prompt quality scores from 2.94 to 4.38 out of 5 and showcased the value of design for shaping LLM behavior.
- Partnered with executive leaders to define a 3-year product vision, build customer journeys and a functional prototype whose videos circulated across the company and led to new work streams across all CX teams.
- Designed an AI-powered list scanning experience, built an iOS prototype in code, tested multiple variants, and compiled and labeled a dataset of real shopping list images for LLM evaluation. Feature is currently rolling out.
- Led design for the Meals tab on web and native, which now reaches 500K+ monthly active users and drives ~$3M in monthly add-to-cart value.
- Collaborated with Data Science to turn an early recipe chatbot into a designed experience, co-writing the system prompt. Its learnings green-lit the AI-assisted search initiative.
- Spotted early how AI-generated code could change design workflows, recorded demos, mentored designers, and gave talks to help the design team level up and understand what is changing and how to adapt. My work kicked off AI tool adoption for the design team.
- Led design for the Inspired Meal Planning experience aimed at providing personalized meal plans to Texans struggling with diabetes. Inspired recipes had an add to cart rate that was 4x higher than a normal recipe. The project was sunset but the learnings shaped the Recipes redesign and the Personalization strategy.
- Led the design of an in-store inventory management handheld scanner experience called FLOR which resulted in retiring an older unsupported device running Windows CE for 40,000+ store employees.

Frost Bank

May 2016 – May 2020
4 years

UX Designer IV

- Ran a baseline usability study that set efficiency and effectiveness metrics, surfaced 22 major issues, and drove an action plan to fix them.
- Led design of debit card management in the Frost mobile app, letting 250,000+ customers replace cards, order new cards, and change PINs.
- Led design and implementation of Aurora, Frost's first design system, helping UX and engineering teams scale with consistency.
- Redesigned account opening, uncovered where and why users abandoned, and turned the findings into 5 business cases.

Skills & expertise

AI / ML
Prompt design
Eval design
Prompt optimization
Product vision
Design strategy
Prototyping with code
Design-to-code workflows
Design systems
User research
Lean Startup

Tools and code

Claude Code
